

Auto Take Off

Auto Take off program(AT) is a customised application which works along side AutoCAD for any Design & Build firm, Architects and various sectors such as Industrial, Retail, Healthcare being few of them.

Specifically designed to suite any AutoCAD version, this application can be used to produce a detailed list of components for any specified category.

The application can calculate all inserted blocks with product no., quantity, description and suppliers information, which can be exported to various available formats. It can be used to generate take off for partitions, ceilings, furniture, electrical & data, floor covering, fire & alarm detections and much more...

Its intuitive interface enables immediate productivity, while more advanced features allow greater flexibility in reviewing the whole or part project.

Features :

- Instant Bill of Quantity
- Easy to use
- Works with any AutoCAD Version
- Export to Excel available
- Professional look

Benefits :

- Accurate and Error free
- Saves hours of manual take off
- Easy editable database
- Displays detailed specifications
- Customised information can be displayed

Categories List :

- |              |                |                    |
|--------------|----------------|--------------------|
| • Partitions | • Lighting     | • Air Conditioning |
| • Doors      | • Power & Data | • Wallstore        |
| • Furniture  | • Floor Boxes  | • Floor Covering   |
